About

The truth is, this author has wanted a Supernatural Research Center since ISGP's very beginnings in 2005 (and really 2003). However, the first 20 years largely ended up being spent documenting all the conspiracy, UFO and new age disinformation being pushed through shows as Coast to Coast AM.

It also tends to be a very dicy mix: political analysis with spirituality. Then again, around the time of creating this center, the BBC [1], New York Post [2], and Daily Mail [3] all reported on a study into near-death experiences. Even the New York Times [4] and the Washington Post have occasionally reported about ghosts. [5] And now it is me.

Is it going to be great for "credibility" and getting people to link to you? Maybe not. However, no mainstream or alternative media wants to link to ISGP anyway, and average people can't even find it due to Google Censorship, so who cares anymore? On top of that, much of ISGP's research came to be intertwined with famous people, providing a much-needed layer of "fuck you". I'm not sure how much is going to ever be discussed here though. Maybe I'll upload everything next week. Or I will never do it.

In any case, maybe slowly, through this center, ISGP can also start to genuinely try to build a credible foundation in the supernatural domain as well. This basically still is just a preliminary trial center though. In order to really get to the bottom of various issues, money for travel expenses and "access" likely is needed to a greater extent than with writing about political affairs.

I have neither.
